machining processes have existed for a long time but it was only after the scientific study of these processes which started some fifty years ago that major improvements in tool design tool materials and machining techniques where brought about this book is an attempt to consolidate the basic scientific studies in the machining area so that fundamental mechanics and other concepts related to the primary

machining processes could be understood the chapters have been arranged in a logical sequence and the materials are presented in such a manner that no special background is required the book is essentially designed for senior undergraduate mechanical production engineering students but practicing engineers will also find it useful for tool and product design the topics covered includes mechanics of machining processes measurement of cutting forces thermal aspects of machining tool wear and tool life economics of machining and grinding of metals the basic analyses presented have been illustrated through numerical examples

as machining processes become more advanced so does the science behind them this book emphasizes these scientific developments in addition to the more widely covered technological aspects providing a full understanding of how machining has adapted to material constraints and moved beyond conventional methods in recent years numerous processes have been developed to allow the use of increasingly tough corrosion resistant and temperature resistant materials in machining the advanced machining processes covered in this book range from mechanical thermoelectric and electrochemical including abrasive water jet machining electric discharge machining and micromachining ion beam machining and hybrid processes it also addresses the sustainability issues raised by these processes the underlying science of machining is centered throughout as none of these processes can reach their full potential without both technical expertise and scientific understanding advanced machining science and its scientific approach will be of particular interest to students researchers and shop floor engineers

this book gathers the proceedings of the 15th iftomm world congress which was held in krakow poland from june 30 to july 4 2019 having been organized every four years since 1965 the congress represents the world's largest scientific event on mechanism and machine science mms the contributions cover an extremely diverse range of topics including biomechanical engineering computational kinematics design methodologies dynamics of machinery multibody dynamics gearing and transmissions history of mms linkage and mechanical controls robotics and mechatronics micro mechanisms reliability of machines and mechanisms rotor dynamics standardization of terminology sustainable energy systems transportation machinery tribology and vibration selected by means of a rigorous international peer review process they highlight numerous exciting advances and ideas that will spur novel research directions and foster new multidisciplinary collaborations

these proceedings collect the latest research results in mechanism and machine science intended to reinforce and improve the role of mechanical systems in a variety of applications in daily life and industry gathering more than 120 academic papers it addresses topics including computational kinematics machine elements actuators gearing and transmissions linkages and cams mechanism design dynamics

of machinery tribology vehicle mechanisms dynamics and design reliability experimental methods in mechanisms robotics and mechatronics biomechanics micro nano mechanisms and machines medical welfare devices nature and machines design methodology reconfigurable mechanisms and reconfigurable manipulators and origami mechanisms this is the fourth installment in the iftomm asian conference series on mechanism and machine science asian mms 2016 the asian mms conference initiative was launched to provide a forum mainly for the asian community working in mechanism and machine science in order to facilitate collaboration and improve the visibility of activities in the field the series started in 2010 and the previous asian mms events were successfully held in taipei china 2010 tokyo japan 2012 and tianjin china 2014 asian mms 2016 was held in guangzhou china from 15 to 17 december 2016 and was organized by the south china university under the patronage of the iftomm and the chinese mechanical engineering society cmes the aim of the conference was to bring together researchers industry professionals and students from the broad range of disciplines connected to mechanism science in a collegial and stimulating environment the asian mms 2016 conference provided a platform allowing scientists to exchange notes on their scientific achievements and establish new national and international collaborations concerning the mechanism science field and its applications mainly but not exclusively in asian contexts

this book discusses technological developments by distinguished figures in the history of mms mechanism and machine science it includes biographies of well known scientists describing their efforts experiences and achievements and offering a modern interpretation of their legacy this volume includes scientists from a wide range of time periods academic disciplines and geographical backgrounds such as giovanni bianchi homer taqi al din jacques de vauanson ma jun xu baosheng alexander alexandrovich golovin francesco di giorgio and cesare rossi covering a wide range of figures within the field of history of mechanical engineering with a particular focus on mms this fourth volume is of interest to and will inspire the work historical or not of many

this book gathers invited contributions as survey and research reports in mechanism and machine science mms ranging across the entire field related in most instances to the works of late prof carlos López cajún one of the field's most prominent scholars the book provides state of the art information and showcases the latest achievements and challenges of mms the book is an accessible avenue to understanding ideas and solutions by leading international scientists who offer much needed historical insights into the mms field with future perspectives

finishing is the final operation after a part is sized and shaped currently in high tech industries there is a demand for nano level surface finishing of components this process is done to improve the surface finish to remove the recast layer or to remove surface and sub surface defects the result is low friction longer product life and low power requirements equally important is the aesthetic aspect of the product this subject is growing very fast from the technology as well as a science point of view books on this subject are very limited particularly those ones that deal with both the science as well as the technology aspects
